

MediMind – Core Data Sources

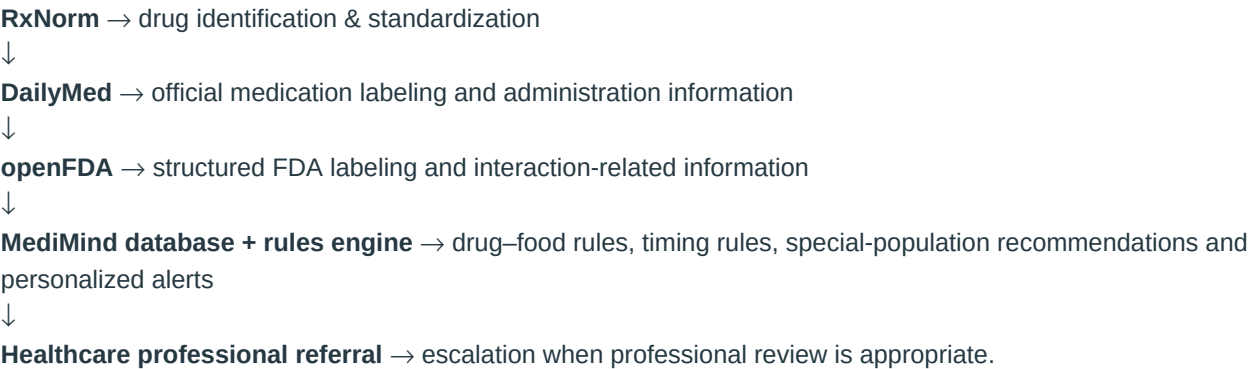

Recommended free/public data sources and their specific roles in the MediMind web MVP.

Database / API	Cost	What we use it for in MediMind	Main features used
RxNorm	Free	Drug identification & standardization	Generic/brand names, RxCUI, drug strength, dosage form, standardized drug mapping
DailyMed	Free	Official medication information	Administration guidance, warnings, precautions, contraindications, food-related information, special populations
openFDA	Free	Structured FDA drug-label information	Drug interactions, administration, warnings, geriatric/pediatric information, patient information
PubChem	Free	Chemical/compound information	Chemical names, synonyms, molecular formula, molecular weight, chemical structure, compound identifiers

MediMind Module Assignment

MediMind module	Primary source
Drug Search & Identification	RxNorm
Drug Information	RxNorm + DailyMed
Drug–Food Interaction	DailyMed + openFDA → MediMind rules
Administration & Timing	DailyMed + openFDA
Special Population Recommendations	DailyMed + openFDA → MediMind rules
Chemical / Drug Profile	PubChem
Alerts & Recommendations	MediMind rules engine
Healthcare Professional Referral	MediMind's own system

Recommended MVP Architecture

Note: PubChem is optional for the first MVP. It is mainly useful for chemical and compound information and is not the primary source for drug–food interaction decisions. The core three sources are RxNorm, DailyMed and openFDA.
